

KARTA KATALOGOWA

Gazoszczelny kombinezon (skafander) przeciwochemiczny Vautex Elite S

Single piece body chemical protective suit with gas tightly attached and replaceable boots and glove system. The suit material is composed of:

- outside elastomer surface
- multilayer film laminate
- elastomer intermediate layer
- polyamide carrier fabric
- inside butyl surface

The Vautex Elite S offers reliable protection against gases and vapours, solid and liquid chemicals as well as radioactive contamination.

The Models:

Vautex Elite S

the full face mask and the compressed air breathing apparatus are worn inside the suit.

Vautex Elite S GALLET

Same suit as the Vautex Elite S but incorporating a plastic plate for helmet positioning and a shorter zipper in the head section to accommodate the MSA GALLET helmet.

Vautex Elite S Expert

The economic version for the user with seldom use, which do not require replacing the lens. For this reason the lens is firmly integrated into the suit. This reduces the weight of the head

Vautex Elite S Dual

This suit version combines the benefits of an applied compressed air line system with those of a selfcontained breathing apparatus. The Dualsystem is capable of switching from a breathing apparatus to a compressed air line system and back again. It consists of an Automatic Switch Valve [ASV] and an air distributor inside the suit. This sophisticated system ensures mobility, extended service time, comfort and enhanced safety when the air line system fails.

Vautex Elite S GALLET Dual

Same suit as the Vautex Elite S Dual but incorporating a plastic plate for helmet positioning and a shorter zipper in the head section to accommodate the MSA GALLET helmet.

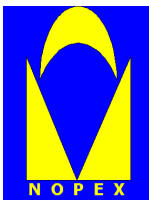

All suits features the following properties:

- high chemical resistance
- good mechanical stability
- increased resistance against flame impingement
- backside with removeable back padding
- gastight zipper
- integrated transponder
